DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1-5, drawn to a computer based method and apparatus for preparing G-CSF analog, classified in class 702, subclass 22, for example.
- II. Claims 6-8, drawn to a method of crystallizing, classified in class 530, subclass 402, for example.
- III. Claim 9-59, drawn to G-CSF analog, class 530, subclass 351, for example.

The inventions are distinct, each from the other because of the following reasons:

The G-CSF analog of Inventions III and method of crystallizing of Invention II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the G-CSF analog can be used to produce antibody.

The G-CSF analog of Inventions III and computer based method and apparatus for preparing G-CSF analogs of Invention I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be

shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the G-CSF analog can be used to produce antibody.

The methods of Inventions I and II are distinct from each other wherein the two groups of methods are independent, using separate method steps, active agents and having different effects. The method of Group requires viewing information of the structure of G-CSF using a computer and the method of Group II is method of crystallization, which does not require viewing information of the structure of G-CSF using a computer

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter, restriction for examination purposes as indicated is proper. A search of the art for Inventions I-III would not be co-extensive with each other. Because the searches required for these inventions are not co-extensive an examination of the materially different, patentably distinct inventions in a single application would constitute a serious burden on the examiner.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
